**Flammability:** Non Flammable

**Extinguishing media:**
- **Appropriate extinguishing media:** Dry chemical powder, carbon dioxide, and alcohol resistant foam. Water may be in effective. Do not use water jet or fog (spray) to extinguish. Water can be effective in cooling down the fire-exposed containers and knocking down the vapours. Water jets may be used to
flush spills away and dilute the same to non-flammable mixtures fog or alcohol-resistant foam by directing streams to the periphery of the fires to prevent spread.

Special Protective Equipment and Precautions for Fire Fighter:
- Evacuate the area and fight fires from a safe distance.
- If tank, rail car or tank truck is involved in a fire, ISOLATE for 800 meters (1/2 mile) in all directions; also, consider initial evacuation for 800 meters (1/2 mile) in all directions or as per locally valid procedures.
- Fire fighters must wear Self Contained Breathing Apparatus (SCBA) and full protective clothing. The chemical is harmful in contact with skin.
- Report any run-off of fire waters contaminated with this chemical as per local and federal procedures applicable.

Unusual fire and explosion hazard:
- Toxic vapors may be released on thermal decomposition including nitrogen oxides, carbon monoxide, cyanide and irritating and toxic fumes of Hydrogen chloride.
- High vapor concentration may result in an explosion hazard.
- Vapors are heavier than air. May travel considerable distance from source and flashback.

SECTION 6: ACCIDENTAL RELEASE MEASURES

Minor Spills

Toxicity:
Ecotoxicity:
The Ecotoxicity data is not available.
- Fish ChV : - 0.38 mg/l (Estimated).
  It is expected that 2-Amino-5-Chloropyridine is chronically toxic to fish.

Persistence and degradability
- It has estimated that 2-Amino-5-chloropyridine is expected to be found predominantly in soil and its persistence estimate is based on its transformation in this medium. Its half-life in soil, 75 days, exceeds the EPA criteria of >= 2 months (and <= 6 months). Therefore, 2-Amino-5-chloropyridine is estimated to be persistent in the environment. The persistence in sediment by its potential for biodegradation in anaerobic (oxygen free) environment.

Bio accumulative potential
- BCF = 2.8
- Log Kow= 1.17 at 25 °C
  Based on the Log Kow and Bio concentration factor value it is expected to have low potential to concentrate in fatty tissue of fish and aquatic organisms relative to its surroundings. The estimated bio concentration factor (BCF) for 2-Amino-5-chloropyridine 2.8, does not exceed the EPA bio concentration criteria. It has estimates that 2-Amino-5-chloropyridine is not expected to bio accumulate in the food chain because it does not exceed the BCF criteria.

Mobility in soil
- Log Koc = 1.861 (Estimated).
- Henry's Law Constant = 1.297E-007 atm-m3/mole.
- Log Kow = 1.17 (Estimated).

Other adverse effects.
- Environment Fate:
  Based on the environmental modeling, this material is expected to be found predominantly in soil and it has estimated to be persistent in the environment. It is not expected to bio accumulate in the food chain because it does not exceed the BCF criteria. Since this is an estimated result it is recommended that the material should not be disposed into the environment. The material should never be disposed into the sewage.
